regulded while bind to the DNA binding domain of transcription factor EDF and inhibit cell cycle progression may be useful as research agents to investigate the interaction between EDF and EPF. In the activation for two units by EDF INFO in Providing to They may also be used for inchaining the SEF INFO in Providing to They may also be used for inchaining the six and rest in a cell, particularly for treatment of rancer or other proliferative discreture such as partiasis and restenosis.
Peptide which binds to transcription factor ROF 1 DNA binding domain
                                                                                                                                                                                        AAB01497 standard; peptide;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Esptides binding to the ERA litaling demain of tracernities for in
and inhibiting cell cycle progression, useful for the treatment of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           psoriasis; restenosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              DNA binding, transcription forms; E2F; E2F 1; call cycle; DP-1; activation; transcription; gogtosis; polifornis disorder;

They may also be used for inducing approxis and/or cell cycle arrest in a cell, particularly for treatment of cancer or other proliferative.
Peptides binding to the DNA binding demain of transcription fact and inhibiting cell cycle progression, useful for the treatment
                                                                                                                                                                                                                                                                                                                                                               AAB01505 standard; peptide; 6 AA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Of protein-peptide complexes (SPPC) associated with tumours that is specifically immunogenically cross-reactive with cell surface ussociated CC specifically immunogenically cross-reactive with cell surface ussociated CC specs specific to target cancer (TC). Also described is an isolated CC antigen-kinding fragment if in antibody that kinds specifically to SPPCs CC antigen-kinding fragment if in antibody that kinds specific alone real CC surface-sesociated SPPC of TC (T) has cyrostatic activity and can be cused in vaccine production and as a tumour-specific immunogenic response CC inducer. (I) is useful for treating 71 types of cancers or tumours in a CC subject, such as astrocytoma, fibrosarcoma, myxosarcoma, liposarcoma, CC oligodendroglioma, pendymoma, medulloblastoma, and primitive neural CC ectodermal tumour (PNET). (I) is useful as cancer immunogen including CC ectodermal tumour (PNET). (I) is useful as cancer immunogen including CC vaccines. (I) is useful for diagnostic and palliative use, for detecting CC malignancy in an individual AAM4707 to AAM47109 represent poptidos which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAW62149
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              RESULT 15
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match
                                                                                                                        protein, and so obtaining one or more inhibitory ligands; and (c) determining which of the inhibitory ligands can mediate a boological activity of the target protein. The present sequence represents a potential binding peptide for Haemophilus influenzae tyrosine tRNA synthetase from an example of the present invention. The method can be used for identifying drugs which can mediate the biological activity of a target protein. It can be used to identify the biological activity of a target protein whose biological function is not known and perhaps
                                cannot be determined directly. The method can also be used to identify new inhibitory ligands of specific target proteins. The method provides high throughput screens which are essentially identical for similar and dissibilar targets, typassing the need to develop distinct ascrys for biochemically diverse targets.
                                                                                                                                                                                                                                                                                                            A method has been developed for identifying a ligand which mediates the biological activity of a target protein (T) by inhibiting the binding of (T) to a binding partner. The method comprises (a) screening a first combinatorial library comprising first member ligands for binding to the target-binding ligands (TBLs), to identifying one or more TBLs; (b)
                                                                                                                                                                                                                                                                       screening a second library comprising second member ligands for the ability to inhibit the binding of the transfer of the TDIS to the farget
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         WEI;

Hydrolysis of the 1,4 buta linkages bot acetyl D glucosamine and N acetylmynamine acid in populocyll between lymnus if the prinkaryones cell walls.

15 TISSUE SPECIFICITY: FOUND IN THE MIDGUT.

16 PEVELLOMENTAL STAGE. MAXIMAL EXTRECSION IS FOUND FORTHOR THE LATE STAGE. THE EXPRESSION IN SECOND UNDELECTABLE IN THE LATE STAGE. THE EXPRESSION IN ABULIS IS SIMPLAS TO THAT OF FIRST GEOGRAP LATE MAXIMAL INSTARS.

16 SAMILARITY: MEGLAS: TO FEAMILY AS TO SHAWAL HYLFOLASES.

17 CAUTION: Bef. 2 Englance differs from that shown due to early gene model prediction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      STRAIN-Berkeley;

They may also be used for inducing aproposis and/or cell cycle arrest in a cell, particularly for treatment of cancer or other proliferative disorders such as psoriasis and restenosis
                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Peptide which binds to transcription factor E2F-1 DNA binding demain

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at frp wipo int/pub/published_pot_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human fetal liver -

                                                                                   The present invention privides a number of hingle even number said probes which are derived from general sequences expressed in the human bone marrow. They have be used to be useful expression in home marrow samples, which may enable the improved dispussion and treatment of correct coch as lymphoma, loukachia and myoloma. The present acquence is a protein encoded by one of the probe of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epileps, and danters. The present sequence is a protole enoughly one of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention provides a number of single exon number acid probes which are derived from genomic sequences expressed in the human brain. They can be used to measure gene expression in brain cell samples, brain. They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system along the like its diagnosis.
                                                                                                                                                                                                          Human years derived angle exciption of the parket and of for analytic years expression in Luman bare marinx
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAM/4549 Standard; Protein; 36 AA.

The propert invention relates to single each nucleic hild probed (CENF) see ANT31315-ANT57546). The present sequence is a peptide encoded by one cath probe. The problem are useful for probleming a minimum property for probleming and displaying gene expression in surples derived from human procents. The problem are useful for untenstal displaying for human genetic disorders.

                                                                                                                                                                                                                                                                                                                                                                                                              acids may be used to produce the polypoptides, by inserting the nucleic acid and its complementary sequences may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acid and its complementary sequences may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acid sequences in namples, and therefore which patients may he in need of restorative thorapy. The proteins may also be used as antigens in the production of antibodies against bone marrow proteins and in assays to identify modulators of their expression and activity. The antibone marrow protein antibodies and antagonists may also be used to down regulate expression and activity. The antibales may also be used as diagnostic agents for detecting the presence of the protein in samples
                                                                                                                                                                                                                                                                                                                 (e.g. by enzyme linked immunosorbant assay (ELISA)) The proteins may be used to regulate haematopolesis activity, and consequently in the treatment of myeloid or lymph cell disorders; in tissue regeneration, such as wound healing; as a nutritional supplement; and in treatment of immuno disorders such as severe combined immunodoficiency (SCID).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Pone marrow, diagnostic; therapeuric; gene therapy; antigenic; haematopolenis; myeloid; lymph cell disorder; tissue regeneration; wound healing; nutritional supplement; immune disorder, severe combined immunodeficiency; SCID.
